New System - November 10, 2008

Confirmation of Coordinated Repeater

Your system as listed above is coordinated by The Indiana Repeater Council. **Any changes to your system such as HAAT or ERP, that will affect transmitter or user coverage must be re-coordinated.** If this is an update, technical data provided with the latest approved coordination or re-coordination will prevail for a valid coordination. System must be in full compliance with current FCC regulations and good Amateur operating practices. Unless otherwise specified, this system must be operated on a continuous basis. Failure to do so for a period of 60 days or more may subject this system to de-coordination. Waivers may be applied for in extenuating circumstances. Coordinations are granted on a basis of non-interference with existing systems coordinated by a coordinator recognized by the NFCC or the Indiana Repeater Council. We reserve the right to modify or discontinue this coordination as necessary if harmful interference occurs to one or more of these existing systems. CTCSS is recommended but not required and is left to the repeater owner or trustee's option unless otherwise specified.

Updates must be filed with us every two years to assure coordination remains valid.

IRC membership is not required for coordination. There is no charge for IRC services.
